Salmeterol superfine formulation

AB The present invention relates to a pharmaceutical formulation for use in

the administration of a long-acting .beta..sub.2-

agonist by inhalation. In particular this invention relates to a

chemically stable, highly efficient salmeterol HFA solution

formulation to be administered by pressurised metered dose inhalers (pMDIs) characterized by a deep lung penetration. The invention also relates to methods for the preparation of said formulation and to its use in respiratory diseases such as asthma and chronic obstructive

pulmonary disease (COPD).

TIAerosol formulations containing esters of 3,17-dihydroxy oestratriene

derivatives for pulmonary delivery

The invention discloses formulations for administration with pressurized AB metered dose inhalers containing as active ingredient esters of

3,17-dihydroxy oestratriene derivatives, in solution in a

hydrofluorocarbon propellant, optionally one or more co-solvents, and their use for the treatment of postmenopausal symptoms as well as of menstrual migraine headaches.

L7 ANSWER 9 OF 17 USPATFULL on STN

TI Aerosol formulations for pulmonary administration of medicaments to

produce a systemic effect

AB The invention discloses an aerosol pharmaceutical composition comprising a medicament in solution in a mixture of a hydrfluoroalkane

propellant and one or more co-solvents wherein the aerosol liquid droplets delivered on actuation of the inhaler have a particle size

comprised between 0.5  $\mu m$  and 2.5  $\mu m$ , with a

median aerodynamic diameter of about 1-2  $\mu m$  and wherein the fine particle fraction

is at least 30%.

ΤI Pressurized metered dose inhalers and pharmaceutical aerosol fomulations

Provided are pressurized metered dose inhalers containing stable AB

formulations of a .beta.-agonist drug in suspension

or solution. Also provided are aerosol formulations suitable

for inhalation therapy containing a .beta.-agonist

drug in suspension or solution.
